ANTISLIP

A close-up photograph showing a cross-section of a layered material. The top layer is a dark grey or black material. Below it is a thick, bright blue layer, which is the anti-slip surface. Underneath the blue layer is a thin, light-colored layer, possibly a substrate or adhesive. The bottom layer is a thick, light brown material, likely a core or backing. The layers are stacked on a wooden pallet, with a wooden beam visible at the bottom left.
